Aptean Unveils Revamped Made2Manage ERP

by ROHIT ROY / 25th August 2015

Aptean, the Complaints Management, CRM, ERP and Supply Chain software applications enabler has announced the introduction of Made2Manage 7.5, its latest ERP offering. The services and support solution, designed for small and medium-sized discrete manufacturers, signals the complete transition of the Made2Manage platform to Microsoft .NET technology, along with the adoption of the Microsoft SQL Reporting Services as its reporting engine.

Made2Manage 7.5 offers new functionalities and capabilities based on inputs from customers. This includes the ability for bar code posting, multi-currency enhancement, advanced engineering change orders, shop floor management, planning and scheduling, and control of sales order status. The solution provides a seamless integration of enterprise resource planning and scheduling activities with shop floor execution in evolving, to-order environments.

Pandu Vangal, Made2Manage Product Director at Aptean said in a [release](#), "Made2Manage 7.5 operates at the speed of your shop floor, driving your operations to run at maximum efficiency and quickly react to customer demands."

Made2Manage allows for adapting customer pricing, besides tracking and reporting to enhance on-time delivery.
