

# ROSS INVENTORY MANAGER (RIM)

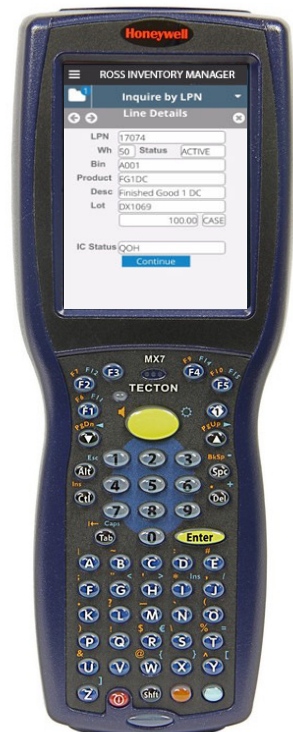

## DATA SHEET

Featuring comprehensive mobile device compatibility and tools designed to maximize efficiency and ease of use on the shop floor, RIM is the future of shop floor data collection for Ross.

## ENABLING ROSS DATA COLLECTION ON YOUR DEVICE OF CHOICE

Ross Inventory Manager (RIM) has been designed to simplify your installation and use of data collection on your device of choice. Utilizing the HTML5 technology with the Google Chrome browser, you can now access the Ross Data Collection application on Android, Windows and iOS tablets, Android and iOS smartphones, or your PC and MAC. Handheld mobile computers/scanners with Android O/S are also supported. Forget about having to download and install IAF Mobile on handheld scanners. Connecting to Ross Data Collection with RIM is as simple as following the URL in your browser and entering your login credentials.

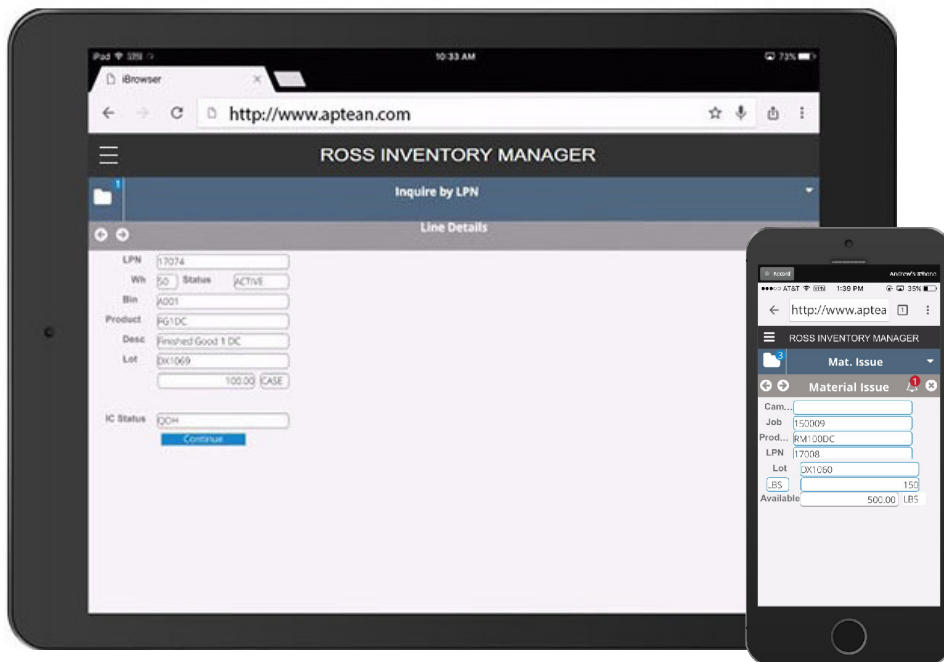

As manufacturers of mobile computers continue to adopt Android operating systems, Ross Data Collection is there to support these newer devices. In addition, you can continue to use IAF Mobile on your existing Windows CE scanners allowing you to take advantage of newer technology without having to replace all of your existing mobile scanners.

With RIM, casual users of Ross Data Collection, such as warehouse supervisors and inventory managers, can now access Ross Data Collection on their mobile device as needs arise without having to find a handheld scanner or go back to the office. For example, if an inventory manager is in the warehouse and needs to check inventory, or a warehouse supervisor is in the shipping area and needs to assist with confirming a priority shipment, they can do this with their mobile device.

## UPGRADED UI FEATURES

Ross Inventory Manager (RIM) improves the user experience with upgraded menu features and user interface. With the new menu structure, users can easily browse all sections of the menu without having to individually select each section to view their options. Should you choose to view multiple tabs, opening and switching between these screens is now easier with RIM as well. The notification area keeps the user informed on the number of active tabs/screens and allows for seamless mobility between windows. With the ability to access Ross Data Collection from your device of choice, users will now have necessary LPN and inventory information at their fingertips. These features combined, along with an enhanced List of Values search feature, the upgraded user interface improves the look and feel of the data collection screen.

Simply by upgrading to IAF 9.2.5, Ross Inventory Manager becomes available for all service packs of Ross ERP 7.1, offering an efficient view of license plate and inventory information. RIM is certified with the Google Chrome browser on tablets with Windows, Android, and iOS, both Android and iOS smartphones, Windows PC's or Mac computers, and certified handheld mobile computers with Android operating systems. This capability provides the same end user experience across all devices.

Android-based handheld mobile computers currently certified by Aptean include:

- Zebra MC9200
  - Android 4.4.4 with Mobility (MX)

## NEXT STEPS
