APTEAN SOLUTION

i-Supply

CHALLENGES

- Lack of visibility into demand, inventory levels and in transit quantities for a high critical supply chain.

BENEFITS

- Inventory on target increase from 15% to 90%
- Order lead time reduced from 32 hours to 5 hours
- Number of trailers at Derramadero yard reduced from 4 to 1
- 15% space improvement at Derramadero floor space

SITUATION

Yanfeng Automotive Interiors (YFAI) is the global leader in automotive interiors. Yanfeng Automotive Interiors is redefining how people relax, work and play inside their vehicle interiors – today and decades from now.

Headquartered in Shanghai, the company has approximately 110 manufacturing plants and technical centers in 18 countries and more than 33,000 employees globally. They design, develop and manufacture automotive interior components for all automakers.

Established in 2015, Yanfeng Automotive Interiors is a joint venture between Yanfeng, one of the largest automotive suppliers in China and Adient, the global leader in automotive seating. The YFAI plant in Derramadero supplies interior parts to the nearby FCA vehicle assembly line producing Chrysler trucks.

CRITICAL BUSINESS ISSUE

Interior parts are typically supplied in sequence - depending on the type of car and its options - directly to the assembly line of the vehicle manufacturer from a Supplier's sequencing facility. Usually there are only a few final assembly activities in these facilities and there is little space for safety stock. Furthermore due to the direct shipment to the assembly line, the supply of the right parts, at the right time and in the right sequence must never fail in order to avoid disrupting the customer's production. In such case the customer will charge severe penalties from the supplier company.

REASON

The company's operational efficiency suffered from the lack of visibility into demand, inventory levels and in transit quantities for such critical supply chain.

CAPABILITY

In order to manage the material flow to the sequencing facility in Derramadero, the regional supply chain manager told us that he needed a solution to pull the right material from a few critical supplier plants multiple times per day. At the same time he was looking for a solution to monitor the inventory level in Derramadero, in a critical supplier plant as well as the in transit quantities to prevent disruption of the supply of parts to the customer's vehicle assembly line. The solution should automatically control the material flow based on tight target inventory boundaries for the sequencing facility in Derramadero.

WE PROVIDED...

... a Software as a Service for real-time supply chain visibility throughout the sequencing facility and the supplier plants with a tool for collaborative inventory management. Furthermore an ordering mechanism was implemented that manages the replenishment of parts using unique order numbers to track what has been called-off, shipped and received. Numerous alerts about critical events and exceptions in the order cycle in real time support the trading partner in managing the critical supply chain.

RESULT

Improvements after implementing i-Supply for the Derramadero sequencing facility supplied by the plants in Queretaro and Santa Maria are:

- Service Level: Inventory on target increase from 15% to 90%
- Order Lead Time: Reduced from 32 hours to 5 hours.
- Material Flow: Amount of trailers at Derramadero yard (pending to be unload) reduced from 4 to 1
- Space Reduction: 15% space improvement at Derramadero floor space.
