

Aptean TabWare EAM

Transforming Maintenance, Asset Management

Aptean TabWare EAM is the leading EAM/CMMS solution for asset-intensive manufacturing industries – such as energy, oil & gas, metals and mining, food and beverage, wood products, and general manufacturing – who aim to maximize asset performance, reduce maintenance costs, and improve operational efficiency. And because it is designed by maintenance professionals for maintenance professionals, the job's daily demands are built into the fabric of TabWare's comprehensive, yet easy-to-use, functionality. TabWare can be deployed on premise or delivered as SaaS, and its configurability eliminates the need for customizations.

Optimize Asset & Operational Efficiency

By aligning industry best practices with out-of-the-box processes that can be easily integrated into existing applications, TabWare is proven to maximize asset performance – leading to lower operating costs and higher profit margins. TabWare is more robust and scalable than other CMMS solutions. And unlike larger EAM solutions, TabWare's specific industry focus and configurability eliminates functionality you don't need, relieving its users of the burden of unnecessary features. This allows TabWare to deliver faster implementation times, reduced overhead costs, and an overall lower total cost of ownership (TCO). Users will benefit by:

- Maximizing asset use -- equipment, people, knowledge, tools
- Ensuring equipment reliability and uptime
- Streamlining maintenance planning and scheduling
- Optimizing MRO inventory management
- Maximizing end product quality
- Managing regulatory compliance

With TabWare you can eliminate data silos and facilitate collaboration across the enterprise by easily integrating TabWare to ERP, MES, SCADA, EHS, and other systems. With TabWare's pre-configured templates and Aptean's enterprise connector platform, connecting your systems is easy.

Benefits

Typical results post implementation include:

- 20% reduction in production downtime
- 10-30% reduction in labor costs
- 30% increase in productivity
- 20% reduction in maintenance material costs
- 5-15% improvement in production capacity

Key Features

- **Equipment Maintenance** – Capture, maintain, and quickly access asset records to reduce equipment failures during maintenance and decrease time spent looking for information and parts.
- **Work Orders** – Mobile-enabled, quick and easy initiation of work orders.
- **Proactive Maintenance** – Capitalize on the asset's data to detect early signals of failure as asset productivity begins to decline, moving to a proactive and predictive (PdM) strategy.
- **Inventory Management** – Ensure the right parts get to the right place at the right time – maximizing asset performance and optimizing stocking levels.
- **Event Tracking** – Track and document any type of event that occurs within a plant for a clear audit trail of activities even outside of the maintenance department.
- **Resource Management** – Easily track staff and contractor data to appropriately assign work tasks, minimize unplanned downtime, and improve safety.
- **Accessible Work Execution** – Streamline work processes with TabWare Technician enabling users to efficiently perform all work activities while in the field on a mobile device with an option to work in disconnected mode, and improving data accuracy with point-of-execution data capturing capabilities.
- **Inspections and Calibrations** – Perform inspection and calibration routes for all of your regulatory, audit and calibration standards. Design and build the inspection points to your exact needs.
- **Purchasing** – Control costs by tracking requisitions, enforcing approval processes, and negotiating pricing.
- **Flexible Work Scheduling** – Get a graphical view of work load leveling across timeframes and resources, to set resource levels, develop “what-if” scenarios and see planned and available resources.
- **Mobile Approvals and Work Requests** – Send automatic email alerts through configurable approval routes for activities that require review or approval to ensure supervisors can instantly approve the requests. Users can also submit maintenance work requests in real-time through a tablet or smartphone.
- **TabWare Escalations and Notifications** – Ensure appropriate parties are notified automatically – either via email or text – through configurable escalation workflows and notifications. Email the TabWare data server for instant access to data reports.
- **Multi-site support** – Provide management visibility and operational execution across multiple sites and warehouses while controlling access to data and work processes for staff at each site.

Aptean provides very specific industries with very specific ERP, supply chain management, and customer experience solutions. In today's fast-paced, highly competitive economy, organizations don't have time to waste forcing homegrown software, spreadsheets, and one-size-fits-all solutions to do things they were never designed to do. Aptean is on a mission to end those workarounds – with industry-specific solutions instead of generic software, expert support instead of making you go it alone, and a steady influx of new ideas instead of the status quo.
