

Customer Story

How a school-based catering company tracks allergens with 100% accuracy

The Company

- Food For Tots is an Ontario-based catering company that provides healthy, delicious and child-friendly meals and snacks to child care centers and schools.
- JustFood customer since 2014

The Problem

- Food For Tots manages 97 different allergens and didn't have a system that was able to accurately manage these allergens and provide clear instructions to the production team on the shop floor.
- The company was using three separate business systems to run its business. This led to data integrity issues and no real visibility into inventory levels, financials and production costs.

The Solution

- Since going live on JustFood, Food For Tots was able to automate its allergen replacement process based on the various needs of each individual child it serves. Food For Tots uses its system to go through each individualized BOM for the day, and automatically assign allergen replacements with 100% accuracy.
- By moving its data and workflows into one integrated ERP, Food For Tots was able to gain visibility into its operations, which led to food cost savings and the ability to make better business decisions.

The Results

Improved food safety

100% accuracy tracking allergens and allergen replacements on the shop floor

Greater production efficiency and inventory management

Significant food cost savings within the first year of going live

Julia Selby
VP of Business Development
Food For Tots

“The impact you can make by having that greater visibility is huge and I did not anticipate that. The end result was a lot more transparency, which ultimately led to positive management decisions.”
