

DATASHEET

# CATALYST ADVANCED REPORTING

Monitor Your Workload, Mine and Analyze Data, View Historic Information

## WOULD YOU LIKE TO?

- Easily monitor your workload
- Evaluate employee and task performance
- Drill down into detailed information on gauges
- Access system screens directly from links within gauges
- Modify system-provided reports
- Incorporate custom reports directly into the Catalyst report menu

Catalyst Advanced Reporting is a powerful toolset that allows you to more efficiently manage your workload and helps you visually detect trends and problem areas. Delve into the details using interactive charts and directly access underlying screens to change relevant settings.

## REPORTS

Reporting is an essential part of any efficient warehouse operation. Catalyst Advanced Reporting allows you to examine your data, evaluate historic data, and print necessary shipping documentation.

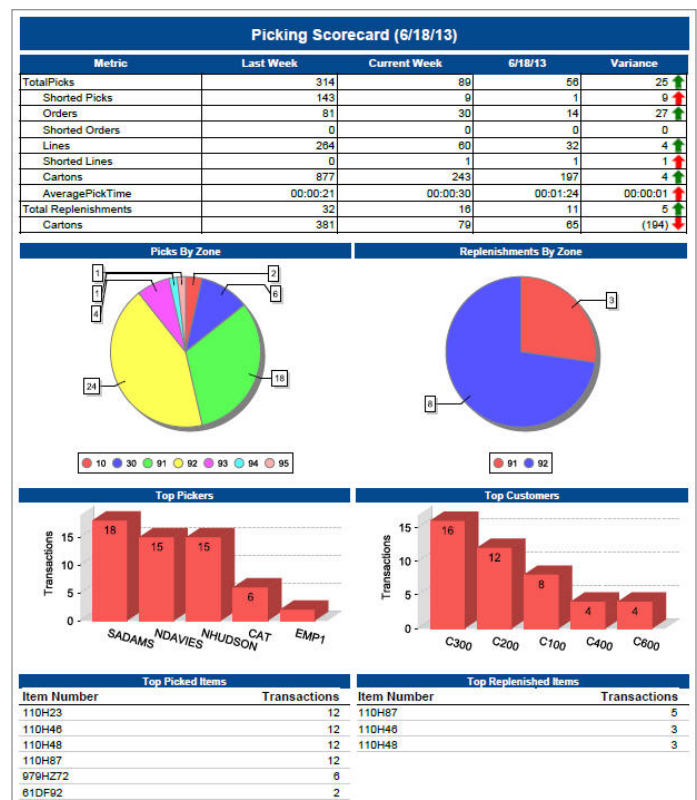

Catalyst provides a multitude of reports across the product suite. The Catalyst WMS alone includes more than fifty standard reports that can be used as-is or modified to meet your specific business needs. WMS reports include inbound, outbound, and intra-warehouse planning and execution reports, shipping documents such as packing lists and bills of lading, and transaction history reporting. Transaction history data plays a key part in the warehouse by allowing you to identify trends, resolve problems, and monitor employee activities.

## SCORECARDS

Scorecards are specialized one-page reports that summarize daily and weekly progress on key measurements.

These reports provide statistical details for a given day and compare the statistical details of the current week to the previous week. The metrics provided indicate how the performance compares to the previous period.

Scorecards consist of a metrics section containing underlying summary data values, as well as graphs to serve as visual indicators of progress. In addition, the metrics section incorporates color-coded arrows to indicate whether the weekly trend is increasing or decreasing compared to the previous week and whether the change is a favorable or an undesirable occurrence.

## GAUGES AND DASHBOARDS

Catalyst gauges provide a graphical, real-time snapshot of activity in your warehouse. They allow you to monitor the amount of work remaining, view order and work progression, spot problem areas, as well as evaluate employee and work type performance.

Personalize the information you see by creating custom dashboards, in which you define the gauges and parameters to be included. Change gauge parameters directly on the dashboard to further customize your view of the data.

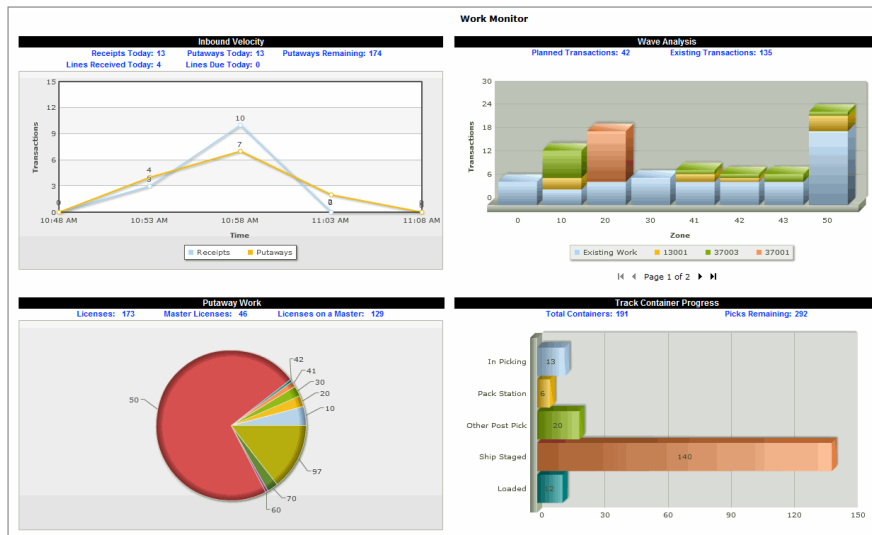

Dashboards are easy to create using drag-and-drop functionality and input parameters can be easily modified to use terminology specific to your business operation. Gauges can be configured to automatically refresh according to a specified time interval.

Construct a dashboard for individual use or share it with others in your operation.

## CONTACT INFORMATION

For more information about the Catalyst product suite or to schedule a demo, contact your Aptean Account Executive or one of the following people in the Catalyst Milwaukee office:

- **Steve Adams**, Director, Operations - Catalyst  
[Steve.Adams@aptean.com](mailto:Steve.Adams@aptean.com)
