

Web API for Aptean Intuitive ERP

Leverage Intuitive's business logic

The Web API for Aptean Intuitive ERP gives your organization full access to Intuitive's business logic – enabling you to manipulate, update, and share that information from outside the Intuitive interface.

The Intuitive Web API is a RESTful API running CRUD (create, read, update, and delete) database operations. It exposes virtually all of the business logic of Intuitive, allowing your system administrators or developers to create custom reporting solutions, integrate Intuitive with other enterprise systems, and more – all while adhering to Intuitive's business rules and master control settings. User-friendly configuration tools give you precise control over the Intuitive actions and resources you want to expose and the users who can access them.

While the possibilities are limitless, below are just a few ways your business can leverage the Intuitive Web API to drive efficiency and alignment across the enterprise:

- **Create a website portal for customers or distributors** – Integrate your website with Intuitive to create a sales portal where customers can enter requests for quotes (RFQs) and create sales orders – or an information portal where distributors can view order status and documentation.
- **Capture additional manufacturing data** – Push data captured by your manufacturing execution system (MES) – like inventory and labor transactions – into Intuitive, or create your own application to capture shop floor data. The Intuitive API ensures that any data pushed to Intuitive adheres to your Intuitive business rules and settings.
- **Integrate account data with your CRM** – Minimize time spent on data entry by integrating the customer and account data in Intuitive with the data in your customer relationship management (CRM) platform.
- **Improve information sharing across organizations** – Is your parent company or subsidiary using a different ERP? Integrate Intuitive with their ERP system to align financial, manufacturing, sales, and personnel data across your organizations and enable global updates.
- **Embed sales tax functionality within Intuitive** – Integrate Intuitive with your sales tax application to enable streamlined sales tax estimates and calculations within the Intuitive interface.

Packages

Aptean provides very specific industries with very specific ERP, supply chain management, and compliance solutions. In today's fast-paced, highly competitive economy, organizations don't have time to waste forcing homegrown software, spreadsheets, and one-size-fits-all solutions to do things they were never designed to do. Aptean is on a mission to end those workarounds – with industry-specific solutions instead of generic software, expert support instead of making you go it alone, and a steady influx of new ideas instead of the status quo.
