

Aptean JustFood ERP

Do food better

JustFood is enterprise management software designed exclusively for food companies. From the moment materials and ingredients enter your facilities, until the finished product is delivered, JustFood is there, helping manage every aspect of your business. JustFood connects departments, data, and processes into a single cloud ERP, giving you the insight, visibility, and control needed to take your business to the next level.

One Solution to Manage Your Entire Food Business

When you invest in a platform developed specifically for the food industry, you remove the need to customize a generic ERP solution, dramatically reducing implementation costs and risks, and accelerating time to value.

JustFood runs on the Microsoft Business Central cloud platform to provide the accessibility, scalability, and reliability that you expect from your management software. And because it is built on Microsoft Dynamics, it integrates with the other Microsoft products you use every day. JustFood provides:

- Food Operations and Production Management – Bring together data from every part of your business and manage all phases of the production cycle from R&D and costing to planning, scheduling, and batch processing. JustFood gives you the oversight you need to identify any inefficiencies, so you can hit profitable targets.
- Food Safety, Quality, and Compliance – Capture the data and processes you need to ensure quality and control over your products, and meet safety and compliance standards with full traceability.
- Food Business, Finance, and Accounting – Built on a proven, reliable, and scalable financial platform, JustFood ensures forecasting, planning and budgeting accuracy. Our team of project managers, business analysts, and solution architects have decades of food industry experience, have deployed hundreds of implementations, and know the importance of a strong financial foundation.

Benefits

- Promote fluid workflow between departments, greater efficiency, and more cost effective business practices with a single solution that gives you full visibility across the enterprise.
- Improve forecasting, planning, and budgeting accuracy with integrated financial management.
- Enable recall and traceability of products to ensure safety, quality, and compliance.
- Lower management and IT costs by connecting departments, data, and processes into a single cloud ERP.
- Gain valuable insight into critical data so that your team can make better business decisions.

Key Features

- **Quality** – Set up mandatory quality audits at every step of the production cycle to ensure product consistency and safety.
- **Food Safety / Compliance** – Leverage traceability, scheduling, and quality functionality to optimize your compliance efforts with global food safety initiatives and regulations.
- **Warehouse / Inventory** – Manage picks, putaways, and containers to easily keep track of inventory and its movement throughout your warehouse.
- **Manufacturing** – Integrate production scheduling and batch management for more accurate forecasting and cost-effective manufacturing.
- **Reporting / Analytics** – Measure performance and create accurate forecasts with real-time and historical production, sales, and costing data.
- **Finance** – Gain greater visibility and insight into business performance through the sharing of costing data.
- **Plant / Preventative Maintenance** – Monitor equipment performance and set maintenance scheduling to ensure checks are completed after a set number of equipment uses.
- **R&D / Product Development** – Use recipe and production data to test new formulations, invent new products, and discover more efficient production methods.
- **Sales** – Account for trade rebates and commissions, and better manage pricing and customer relationships.
- **Purchasing** – Leverage historical and real time data to inform your purchasing schedule and better manage forecasting.
- **Options** – Companies that require additional features, such as advanced warehouse management, handheld device support, production scheduling, and electronic data interchange (EDI), can choose from a number of available upgrades that can be added to the system at any time.
