

Web API for Aptean Made2Manage ERP

Leverage the business logic of Made2Manage

The Web API for Aptean Made2Manage ERP gives your organization full access to the business logic of Made2Manage – allowing you to manipulate, update, and share that information from outside the Made2Manage interface.

The Made2Manage Web API is a RESTful API running CRUD (create, read, update, and delete) database operations. It exposes virtually all of the business logic of Made2Manage, allowing your system administrators or developers to create custom reporting solutions, integrate Made2Manage with other enterprise systems, and more – all while adhering to Made2Manage's business rules and master control settings. User-friendly configuration tools give you precise control over the Made2Manage actions and resources you want to expose and the users who can access them.

While the possibilities are limitless, below are just a few ways your business can leverage the Made2Manage Web API to drive efficiency and alignment across the enterprise:

- **Create a website portal for customers or distributors** – Integrate your website with Made2Manage to create a sales portal where customers can enter requests for quotes (RFQs) and create sales orders – or an information portal where distributors can view order status and documentation.
- **Integrate account data with your CRM** – Minimize time spent on data entry by integrating the customer and account data in Made2Manage with the data in your customer relationship management (CRM) platform.
- **Improve information sharing across organizations** – Is your parent company or subsidiary using a different ERP? Integrate Made2Manage with their ERP system to align financial, manufacturing, sales, and personnel data across your organizations and enable global updates.
- **Improve multi-company processes** – Automate the creation of intercompany arms-length transactions – such as the creation of a Sales Order in Company A when a Purchase Order for a particular vendor is created in Company B – or synchronize Item Masters between companies.
- **Integrate with your payroll system** – Provide time and attendance information from Made2Manage to your payroll processor, and automate the creation of the appropriate journal entries.

Aptean provides very specific industries with very specific ERP, supply chain management, and compliance solutions. In today's fast-paced, highly competitive economy, organizations don't have time to waste forcing homegrown software, spreadsheets, and one-size-fits-all solutions to do things they were never designed to do. Aptean is on a mission to end those workarounds – with industry-specific solutions instead of generic software, expert support instead of making you go it alone, and a steady influx of new ideas instead of the status quo.
