

Shop Floor Manager for Aptean Made2Manage ERP

Seamless Shop Floor Visibility and Control

Made2Manage Shop Floor Manager allows customers to “slice and dice” their shop floors with ease. Labor and inventory transactions are consolidated in one convenient place to enable shop floor supervisors and work center operators to more efficiently manage production.

The Made2Manage Shop Floor Manager application consists of a Supervisor Console and a Work Center Console. Together, these two consoles eliminate the need for paperwork to communicate shop schedules, work order instructions and material lists:

Supervisor Console (Point of Management System) Permits:

- Easy visibility into all shop floor-related information, as well as real-time production status.
- Users to check material status, release/prioritize work orders, and send notes to the shop floor.

Work Center Console (Point of Entry System) Provides:

- Online dispatch list of prioritized work orders and all information required for completion.
- Ability to report labor, issue material and move inventory to finished goods.

Real-Time Shop Control

Primary shop floor management functions – setting work order priorities, releasing work orders, issuing material, moving inventory and reporting labor – can all be done from one place. Both the Supervisor Console and Work Center Console support easy, one-click access to comprehensive work order information.

Supervisor Console Supports:

- Users running “what-if” exercises to view potential impact on material allocation by releasing selected work orders.

- Work order release and material issues.
- Viewing detailed material availability at work order and component level.
- Viewing full drill-down to component and operation level for all work orders in one click.
- Accessing the work order “component where-used” feature, which allows users to view every work order in which a component is used.
- Attach CAD drawings to work orders, viewable right on the shop floor.
- Create shop notes visible in the Work Center Console.

Learn More

To learn more, contact your Account Manager or email us at info@aptean.com.

Work Center Console Supports:

- Material issues.
- Manual and automatic “WIP Receipt” function (completions on last operation automatically generate “Move to Inventory” to default location).
- Viewing work order details, such as materials, operation instructions, work order status, and graphical images by customer, sales order, part no., status, and much more.

Paperless Communication

Made2Manage Shop Floor Manager facilitates paperless manufacturing.

- Eliminate the need for work order travelers and material pick lists.
- Communicate electronic work order instructions, priorities, and material lists between the Supervisor Console and Work Center Console.

Aptean provides very specific industries with very specific ERP, supply chain management, and customer experience solutions. In today's fast-paced, highly competitive economy, organizations don't have time to waste forcing homegrown software, spreadsheets, and one-size-fits-all solutions to do things they were never designed to do. Aptean is on a mission to end those workarounds – with industry-specific solutions instead of generic software, expert support instead of making you go it alone, and a steady influx of new ideas instead of the status quo.
