

Mobile-Enabled Inventory Management for Aptean Ross ERP

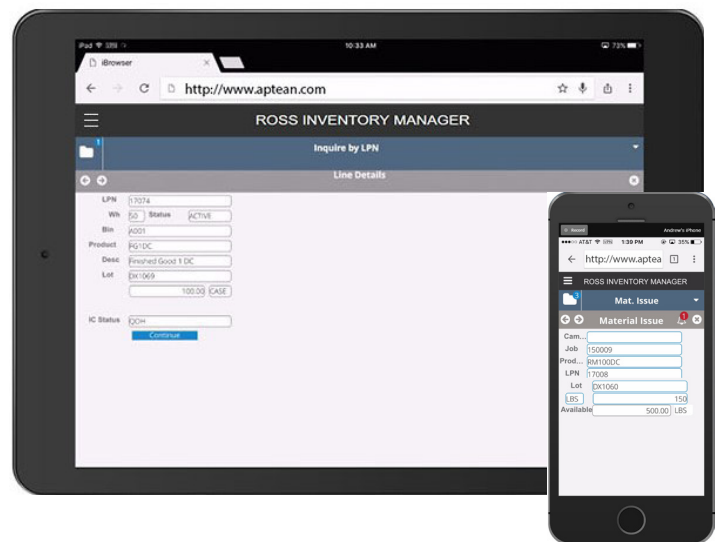

Real-Time Shop Floor Visibility On-the-Go

Data Collection for Aptean Ross ERP provides users with the inventory data they need, when they need it. By gathering real-time data and insight into the operations of your shop floor, manufacturers can automate materials tracking, improve accuracy and productivity, make receiving and inventory management more efficient, speed up shipping, and provide shop floor visibility. Using accurate, real-time data on your device of choice (phone, tablet, handheld scanner, etc.), you'll be equipped to identify and address issues or trends as they arise, resulting in higher quality products, quicker inventory turns, faster time to market, and lower manufacturing costs.

Data Collection on Your Device of Choice

Featuring comprehensive device compatibility and tools designed to maximize efficiency and ease-of-use on the shop floor, Ross ERP offers mobile-enabled data collection on-the-go through our browser-based interface.

Data Collection for Ross ERP equips users with the ability to use their traditional Windows-based handheld scanners to scan bar codes and complete inventory, but Ross Browser takes this one step further. Enabling the use of any device that has an HTML5 compliant browser to enter their data, Ross Browser simplifies the installation and use of Data Collection and allows users can access the application on any device with browser access - tablets, smartphones, computers, or handheld mobile scanners - and adapts to newer versions you may adopt down the line, truly making the device you use your choice.

Enabling the use of Data Collection on any device allows casual users, such as warehouse supervisors and inventory managers, to access the application on their mobile device as needs arise without having to find a handheld scanner or go back to the office. For example, if an inventory manager is in the warehouse and needs to check inventory, or a warehouse supervisor is in the shipping area and needs to assist with confirming a priority shipment, they can do this with their mobile device.

User-Friendly Interface

Easily browse all sections of the menu without having to individually select each section to view your options.

Seamless Screen Mobility

Open and switch between multiple screens while staying informed on the number of active tabs within the notification area.

Data at Your Fingertips

Quickly access Ross Data Collection on any device, providing users with real-time data at a moments notice.

Additional Efficiency

Make receiving and inventory management more efficient by gathering real-time visibility into your shop floor operations.

Accurate, Real-Time Data

Create higher quality products, quicker inventory turns, faster time to market, and lower manufacturing costs with real-time data.

With comprehensive device certification, Aptean Ross ERP provides the same end-user experience for Data Collection users across all devices.

For more information on Mobile-Enabled Inventory Management for Aptean Ross ERP, contact your account manager or email us at info@aptean.com.

Aptean provides very specific industries with very specific ERP, supply chain management, and customer experience solutions. In today's fast-paced, highly competitive economy, organizations don't have time to waste forcing homegrown software, spreadsheets, and one-size-fits-all solutions to do things they were never designed to do. Aptean is on a mission to end those workarounds – with industry-specific solutions instead of generic software, expert support instead of making you go it alone, and a steady influx of new ideas instead of the status quo.
