Mobility for Aptean Ross ERP

Anywhere, Anytime Access to Your ERP

Aptean Ross ERP recognizes the importance of providing continuous, rapid access to your ERP information to ensure your workforce stays connected, anywhere and anytime. By making Ross available as a native iPhone and Android application, as well as offering complete browser-based access, remote workers have on-demand access to pricing quotes, sales history, inventory, and customer accounts. Using simple dashboards, the mobile capability of Ross provides a consistent user experience, even when on-the-go, extending your supply chain operations to mobile devices. Specifically within the ability to access your ERP from any device, Ross includes mobile functionality in terms of data collection, and production and quality management.

Mobile Production Management

Using Ross Production Manager (RPM), operators and supervisors can access Ross ERP from the production floor on their device of choice. As supervisors go from one area to the next they can keep in touch with what’s happening across the factory and production management can view the status and performance of all jobs from anywhere with network access. Increase efficiency, reduce information errors, and eliminate paperwork while gaining access to what’s currently happening in your factory with RPM.

Featuring role-based user profiles and compete functionality on your device, this integrated enterprise application allows workers on the production floor to reference today’s job lists and production plans in real-time and allows supervisors to quickly view job completion percentages, all based on the production area chosen by the user.

With comprehensive mobile device compatibility, Ross offers this powerful mobile production management tool to reduce manual burdens on your staff while simultaneously optimizing your entire production environment.

Mobile Inventory Management

Data Collection for Ross ERP provides users with the data they need, when they need it. By gathering real-time data and insight into the operations of your shop floor, manufacturers can automate materials tracking, improve accuracy and productivity, make receiving and inventory management more efficient, speed up shipping, and provide shop floor visibility.
Using accurate, real-time data on your device of choice (phone, tablet, handheld scanner, etc.), you’ll be equipped to identify and address issues or trends as they arise, resulting in higher quality products, quicker inventory turns, faster time to market, and lower manufacturing costs.

Enabling the use of Data Collection on any device allows casual users, such as warehouse supervisors and inventory managers, to access the application on their mobile device as needs arise without having to find a handheld scanner or go back to the office. Ross equips its users with access to data at their fingertips and at a moments notice for those who need to complete work on-the-go.

**Mobile Quality Management**

The first goal of Ross Quality Manager (RQM) is to help you eliminate handwritten check sheets and spreadsheets – no more clipboards means that you can capture real-time data where the quality checks are taking place. By eliminating paper-based recording and manual entry, you reduce errors and make information instantly available. With this information, you can now access quality manager dashboards and graphs on-the-fly. That allows you to spot trends and recognize issues in a timely manner. With RQM, all of your quality data becomes part of your enterprise system and is also visible in Trace Express.

RQM is designed to reduce costly manual errors, remove paperwork from the QA function, and deliver quality information to your operators regardless of their location within the factory. RQM works on a tablet, so it can move with the workers, enabling them to perform inspections on-the-go. As supervisors move from one area to another, they can keep in touch with the quality activity across all areas of the facility. Quality managers can view the status of all quality control (QC) tests on a mobile device or workstation anywhere they have network access.

Aptean provides very specific industries with very specific ERP, supply chain management, and customer experience solutions. In today’s fast-paced, highly competitive economy, organizations don’t have time to waste forcing homegrown software, spreadsheets, and one-size-fits-all solutions to do things they were never designed to do. Aptean is on a mission to end those workarounds – with industry-specific solutions instead of generic software, expert support instead of making you go it alone, and a steady influx of new ideas instead of the status quo.
